6. On the Formulas tab, click Insert Function. Select the *Lookup & Reference* category in the dialog box and choose the *GETPIVOTDATA*.
7. In the appropriate dialog box, select the second PivotTable as the pivot_table argument.
8. Specify the field and element you want to extract from the second PivotTable in the appropriate *Data_field* and *Pivot_table* argument. Press *Enter*.
9. The resulting formula will extract the data from the second PivotTable and display it in the cell where you entered the formula.

EDIT THE SOURCE DATA OF AN EXISTING PIVOTTABLE

To change the source data of an existing PivotTable in Excel, follow these steps:

1. Select the PivotTable.
2. Select the *PivotTable Analysis* or *Options* tab located on the ribbon bar, depending on which version of Excel you are using.
3. Click the *Edit Data Source* button.
4. The *Change PivotTable Data Source* dialog box will appear. Adjust the data range to include the new source data that you want to use for the PivotTable.
5. Select the *OK* button to close the dialog box and update the PivotTable with the new data.
6. the new data contains additional columns or rows, you may need to adjust the layout of the PivotTable to include or exclude these items. To do this, simply drag the fields between the *Rows*, *Columns* and *Values* areas in the *PivotTable Fields* panel.

PRACTICAL EXAMPLES

ANALYSIS OF SALES BY REGION AND PRODUCT

Suppose we have a worksheet containing a table with product names, sales data, regions, quantities sold, and revenues. Our objective is to obtain a comprehensive overview of total sales trends for each region and product using a PivotTable.
