A	B	C	D
PRODUCT	REGION	QUANTITY	REVENUES
A	Lazio	20	2.000,00 €
B	Lombardia	10	500,00 €
A	Lazio	5	500,00 €
B	Veneto	9	450,00 €
C	Lombardia	18	1.440,00 €

In this scenario, the PivotTable can be created by following these steps:

1. Select the entire table along with its data.
2. Select the *Insert* tab on the ribbon bar and click on the *PivotTable* item.
3. A dialog box called *Pivot Table from table or range* will open. Ensure the selected range is accurate and choose where you want to insert the PivotTable: you can opt for a different worksheet or a specific location within the current worksheet.
4. Drag the *Region* field to the *Rows* section of the dialog box and the *Product* field to the *Columns* section. Finally, drag the Revenue field to the *Values* section.
5. Ensure the aggregation of the *Revenue* field is set to *Sum*. This is usually a default setting.
6. At this point, the PivotTable should display the total sales segmented by region and specific product. Each region will be represented in a separate row, while each product will have its column, showcasing the corresponding total revenues.
7. If desired, you can further customize the PivotTable by adding supplementary fields, changing aggregation operations, sorting the data, and so on.

Row Labels	A	B	C	Total
Lazio	2500			2500
Lobardia		500	1440	1940
Veneto		450		450
Grand Total	**2500**	**950**	**1440**	**4890**

MONTHLY SALES ANALYSIS

Suppose we have a worksheet containing a table with monthly sales data
