categorized by month, product, quantity sold, and revenue. Our aim is to craft a PivotTable to scrutinize the overall monthly sales of each product and a PivotChart to effortlessly exhibit the total monthly revenues.

Here are the steps to follow:

1. Select the whole table, including headers.
2. Click the *PivotTable* item on the *Insert* tab of the ribbon bar.
3. The *PivotTable from table or range* dialog box will open. Ensure that the selected range is accurate, and then choose the desired location where you want to insert the pivot table.
4. Drag the *Month* item to the *Rows* section and the *Product* item to the *Columns* section. Finally, drag the *Quantity* item to the *Values* section, making sure that the aggregation operation is set to *Sum*.
5. At this stage, a PivotTable should appear, capable of displaying the total sales of each product broken down by month.
6. To generate the PivotChart, select the PivotTable you have just created.
7. Select the Insert tab on the Excel bar and click on the *PivotChart* item.
8. Select the type of chart based on the desired output. For instance, opt for a column chart or a line chart.
9. Click *OK*. Excel will generate a PivotChart highlighting total monthly revenues based on the data from the previously created PivotTable. This example illustrates the sales made during January.
