SALES ANALYSIS BY AREA AND VENDOR

Let's consider a scenario where we have a worksheet featuring a table comprising sales data for each product, market area, vendor, quantities sold, and revenue. Our objective is to establish a PivotTable for scrutinizing total sales across each area and vendor. Additionally, we aim to craft a PivotChart to visually represent sales by region.

Follow these steps:

1. Select the entire data table, including headers as well.
2. Click the *PivotTable* item, on the Insert tab of the ribbon bar.
3. In the dialog box that appears, ensure that the selected range is accurate, and then specify the desired location where you want to insert the PivotTabl.
4. Drag the Vendor item to the *Rows* section and the *Area* item to the *Columns* section. Then drag the *Quantity* item to the *Values* section and make sure the aggregation operation is set to *Sum*. Do the same with the Revenue item as well.

Seller/Product	Center	North	South	Grand Total
Blacks			**9**	**9**
B			9	9
Ferrari		**18**		**18**
C		18		18
Gaius	**10**			**10**
C	10			10
Greens			**5**	**5**
5			5	5
Rossi		**20**		**20**
C		20		20
Whites	**10**			**10**
C	10			10
Grand Total	**20**	**38**	**14**	**72**

5. At this point a PivotTable should be generated to highlight total sales categorized by area and vendor.
6. To create the PivotChart, select the PivotTable you just created and go to the Insert tab of the Excel bar. *Click* on *PivotChart*.
7. Select the desired chart type and confirm.
8. A PivotChart should appear showing sales by area based on the data entered in the PivotTable.
