the actions.

6. While recording Excel, select the cell of interest and type *Total* into it.
7. Select the first empty cell in the column with the values of interest and type *=COUNTA(first_value:last_value*). This formula will provide a count of the number of branches. *COUNTA* is used because the branch numbers are stored as text.
8. Click *Stop Recording* located on the *Developer* tab to stop recording the macro.

To see the macro in action, delete the newly added *Total* row and back up the macro by following these steps:

9. On the *Developer* tab, select the *Macro* item.
   Find and select the newly registered *BranchesTotals* macro.
10. Click the *Run* button.
11. If entered correctly, the macro will play back the recorded actions and provide the total count.

However, you will not be able to use this macro in another table because it has been registered as an absolute macro.

To better understand this concept, you can inspect the code by selecting the Macro item on the Developer tab. This will open the Macro dialog box; selecting the *BranchesTotals* macro and clicking the Edit button will open the *Visual Basic Editor* and you will be able to view the code that was
