

Each worksheet in Excel is made up of cells which are identified by a letter-number combination representing their column and row, like A1 or B2.

9. Status Bar

The Status Bar is situated at the bottom of the program interface. It provides information about the current state of the worksheet. For instance, it can display the sum, average, or total number of selected cells.

10. Microsoft Account

You can visit the Microsoft account page to view or modify your account information.

11. Formula bar

The formula bar is a feature in Excel that lets you enter data, formulas or functions in the selected cell. For instance, if you choose cell C1 and enter the number 1994 in the formula bar, the same value will appear in the selected cell.

12. Range
