

- **Code window**
  Each object within a project has an associated code window containing VB code. To access the code window for an object, double-click on the object within the project window. For instance, to view the code window for Sheet1, double-click on Sheet1 in the project window. If no Visual Basic code has been added yet, the code window will appear empty.

WORKING WITH THE PROJECT WINDOW

When working within the editor, each open Excel workbook represents a project. These projects can be thought of as collections of various objects.

To expand a project, click on the plus sign (+) next to the project name in the specific window. Conversely, to collapse a project, click on the minus sign (-) next to the project name.

If the project you're working on includes VBA modules, the project list
