

3. The new form will thus be added to the *Forms Present* folder in the project window. All forms that are created in each workbook will be placed in this folder.

***Removing a VBA module***

There will certainly be situations when you need to remove a code module that is no longer required. In such cases, simply follow these steps:

1. In the project window, select the name of the module you want to remove.
2. Choose the File option and then click *Remove xxx* (xxx indicates the name of the module you want to delete).
3. Alternatively, you can right-click on the module name and choose *Remove xxx* from the shortcut menu.

***WORKING WITH THE CODE WINDOW***

As your knowledge of VBA grows, you'll likely spend more time working
