

5. Next, go to the *Review* tab and choose *Protect Sheet*. Here you will be able to set a password and choose what actions will be allowed on the protected sheet.

PROTECTION OF A FORMULA

Within data protection, it is also possible to protect a specific formula. This tool is especially useful when the worksheet contains complex formulas that should not be modified or viewed by other users. In such a case, the steps to follow are as follows:

1. Select the cells that contain the formula and go to the *Home* tab of the
