

4. Depending on the type of validation you choose, you may need to provide additional settings. For instance, if you choose the *List* option, you need to enter the values you want to allow in the *Source* field, separated by commas.
5. In the *Input Message* tab, you can add a message that will appear when the user selects the cell, to guide it to the expected data type.

6. Inside the *Error Alert* tab, you can add a message that will appear when a user enters an invalid value. In this case, you will need to
