

3. Click the up arrow located to the right of the source box to indicate a cell reference.

Since drop-down lists are often used for data validation, it is useful to fully understand their operation.

REMOVE DATA VALIDATION

To remove data validation in Excel, follow these steps:

1. Select the cell or cell range with the data validation you want to remove.
2. Select the Data tab located on the ribbon and press Data Validation.
3. The Data Validation window will open; click on the Settings tab.
4. Click the Clear All button and select OK to close the appropriate dialog box.

This will remove data validation from selected cells.
