Arrays can be used to perform calculations on multiple data sets simultaneously.

- **Formulas:** formulas are used to perform calculations in Excel. They may consist of numbers, text, or other types of data. Even functions or other elements may be used which follow mathematical and logical operations.

ENTER DATA

Data entry in Excel is a basic and rather simple operation.

We already know that Excel cells can have different types of data, including text, numbers, dates and formulas. To enter a formula, you must start by typing the equals sign *(=)* followed by the formula you want to use.

For instance, if you want to sum the data from two cells, you need to type "*=A1+B1*" in the cell where you want the result to show and press Enter.

Excel even allows you to enter data in row or column format. When you enter data in a row, you move through the cells from left to right. Instead, when you enter data in a column, you move through the cells from top to bottom.

In Excel, cell sizes typically adjust dynamically based on the data input. When data exceeds a cell's capacity, Excel displays the ### symbol to signify overflow. To address this, expand the cell width or reduce the font size for a quick solution.

Excel features also an auto-correct feature that aids in rectifying common typing and spelling mistakes. For instance, if you mistakenly type "*tere is*" instead of "*there is*" Excel will automatically correct the error for improved accuracy and efficiency.

To remove data from a cell in Excel, you can simply select the cell and press the Delete key. However, deleting an entire row or column requires a different approach. To delete a row or column, right-click on the header of the column or row you wish to remove and select "*Delete*" from the context menu items.

When dealing with a large amount of data in Excel, you can efficiently copy and paste information from external sources like text files or websites. To do this, start by selecting the cells where you intend to paste the data. Then, you can either use the Ctrl+V keyboard shortcut or right-click on the
