

Customer lifecycle analysis

Using customer data and conduct, you can analyse their lifecycle to understand how their conduct evolves over time.

This means you can monitor the rate of new customer acquisition, the rate of reorder from existing customers, and the value they generate. This information is critical to understanding the effectiveness of customer acquisition and retention strategies.

Analysis of marketing channels

Especially when using different marketing channels (Social Media, TV, newspapers, email, etc.), it is important to analyse the key metrics of each channel such as the number of clicks, conversion rate, cost per acquisition, and so on.

By entering this data within Excel, you can compare the performance of different channels and identify the most effective ones, improving business decisions in terms of marketing budgets.

Analysis of marketing campaigns

If there are specific marketing campaigns, Excel can be implemented for analysing campaign results.

For example, ROI, CTR (click-through rate), CPL (cost per click) or CPS (cost per sale) can be calculated. In this case, line or bar charts make it possible to visualize the trend of these values and campaigns over time.

Correlation analysis

Another advantage of Excel is related to the fact that it allows you to
