analyse correlations between variables. This means that the program can be used to measure the degree of relationship between marketing expenditures and sales or between other variables that you consider relevant to your goal. This makes it easier to identify the factors that most influence sales and optimize marketing strategies.

USEFUL FORMULAS

- **Sales growth rate**
  Useful for calculating the percentage of sales growth between two periods.
  The formula to be used is as follows: =***((Current Sales – Previous sales) / Previous sales) * 100.***
