5. If you want to insert data within a specific range, you can select the range with your mouse before pasting the data.
6. Click *Paste* in the *Clipboard* section from the *Home tab*. Or you can use the keyboard shortcut *Ctrl + V*.

SPECIAL PASTE FUNCTION

In Excel, the Paste Special function is a crucial feature offering various options for pasting copied data in specific ways. Some commonly used Paste Special function types include:

- **Paste:** this option allows copied items to be pasted using the default settings.
- **Formulas & Number Formatting:** paste everything you copied, including formatting, formulas, or values.
- **Formulas:** paste only the formulas without any formatting or comments.
- **Values:** paste only the values displayed in the cells, excluding the formulas used to calculate them.
- **Keep Source Formatting:** paste only the formatting attributes from the source cells, excluding formulas or values.
- **Picture:** paste an image copied from Excel.
- **No borders:** this option is used when the copied data has borders. By activating this item, you can cancel them.
- **Comments:** paste only the comments of the copied cells.
- **Transpose:** reorient copied data from rows to columns or vice versa.
