ENTER A FORMULA IN EXCEL

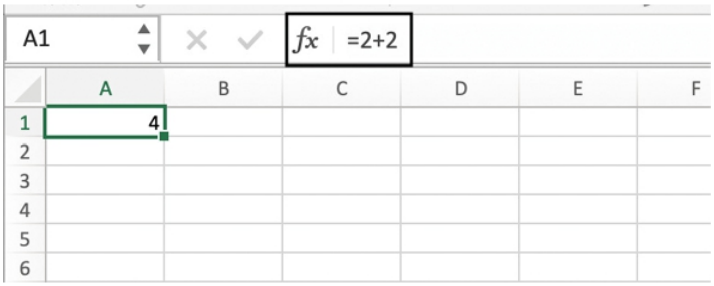

In these pages, we will focus on the steps to follow to properly insert a formula in an Excel cell.

The basic steps to follow are:

1. Select the cell where you want to enter the formula.
2. Type the equal sign (=) to indicate to Excel that you are about to enter a formula.

3. Type in the formula you want to use.
   You can type it manually or use one of the functions on the *Formulas tab* located on the *ribbon bar.*
   For example, if you want to sum the values of two cells, A1 and B1, type *=A1+B1*. Press Enter to activate the formula; the result will be shown in the indicated cell.

When a formula is entered in Excel, the *formula bar* displayed at the top of the worksheet helps the user to read the entered formula. By doing so, you can see and change the formula at any time.

Also, you can use cell references in formulas, so you can perform calculations based on values in other cells. For example, if you want to multiply the value of cell A1 by 10, simply enter the formula =A1*10 in the desired cell. In cases like this, if the value entered in cell A1 changes, the
