

4. If the value in cell A1 is 10 and the value in cell A2 is 2, the formula result will be 5, or 10 divided by 2.
   The result will be displayed in the selected cell and the extended formula in the *function bar*.

HOW TO USE THE SUM FORMULA

Excel provides various methods for summing multiple elements. Particularly when dealing with numerous values across multiple cells, manually inputting them can be time-consuming. In such scenarios, Excel's built-in SUM function proves invaluable, significantly expediting and simplifying the process. Below the steps to follow:

1. Select the cell where you want to enter the formula.
2. Type the equal sign (=) to indicate to Excel that you are about to enter a formula.
3. For instance, if you want to sum the numbers 2 and 3, write *=SUM(2;3)*. The values to be summed should be enclosed within parentheses and separated by commas.
