4. Press Enter. Excel will perform the operation, and the formula result will be displayed in the selected box, and the extended formula will be displayed in the function bar.

As mentioned previously, the SUM function can also be utilized with cell references. In this case, instead of entering the numerical values to be summed, you need to specify or select the cells containing the addends, for example: = *SUM (A2; A3).*

However, the greatest advantages associated with this function occur when you want to sum several cells at once. In these cases, the steps to follow are:

1. Select the cell where you want to enter the formula.
