2. Type the *equal sign (=)* to indicate to Excel that you are about to enter a formula.
3. For instance, if you want to sum all the values contained in column A ranging from row 1 to row 7, you will need to type the following formula: = *SUM(A1:A7)*.

The range between two cells is highlighted with the symbol *(:)* and Excel will sum all the values contained in the cells in this range. You will see the formula result in the selected cell and the extended formula in the *function bar*.

Using this function provides access to endless possibilities for calculating and summing between elements in the worksheet.

For example, the *SUM* function can be used to sum different ranges together, as shown in the image below. In this case, the formula to be used
