

If you want to use cell references, like the values in cells A2 and A3, you should follow these steps:

1. Select the cell in which you want to enter the formula.
2. Type the *equal sign (=)* to indicate to Excel that you are about to enter a formula.
3. Type the formula *=A2-A3*. A2 contains the value 10, while A3 contains the value 5. The formula result will be displayed in the selected cell, in this case the result will be 5.

To perform subtraction, you can also use the SUM function. However, to achieve this, you need to enter the value you wish to subtract with a minus sign: *=SUM(A2, -A3)*.

In this case, Excel will show display this:

HOW TO USE THE *PRODUCT FORMULA*

In Excel, the asterisk (*) stands for multiplication. The steps for multiplying numbers or values are identical to those mentioned on the previous pages.

For example, if you want to calculate the product of 9 and 8, the steps to follow are:

1. Select the cell where you want to enter the formula.
2. Type the *equal sign (=)* to indicate to Excel that you are about to
