4. In this case, both values to be multiplied become the arguments within the function. Similar to the SUM function, the values must be enclosed in parentheses and separated by commas.

The *PRODUCT* function offers the advantage of processing multiple values or a range of cells simultaneously. Take as example the worksheet displayed below:

In this case, it is possible to multiply the factors using the formula: *=PRODUCT(A2:A10)*.

The entire range of values will be multiplied, and the formula result will be displayed in the selected cell.
