

HOW TO USE THE DIVISION FORMULA

The division is the last basic Excel operation and, like all others, is straightforward to use. To perform divisions in Excel, use the symbol "/", with the dividend (numerator) before the slash and the denominator (divisor) after the slash. For instance, to calculate 30 divided by 10, follow these steps.

1. Select the cell where you want to enter the formula.
2. Type the *equal sign (=)* to indicate to Excel that you are about to enter a formula.
3. Type the following formula: *=30/10* and click *Enter*.
4. The formula result will be displayed in the selected cell, while the extended formula will be displayed in the function bar.

This can also be done using cell references, for instance: =A2/A3.
