string, e.g., "*€3.00*".

- **CONCATENATE Function**
  The CONCATENATE function allows you to combine two or more text strings. To apply it correctly, the syntax is as follows:

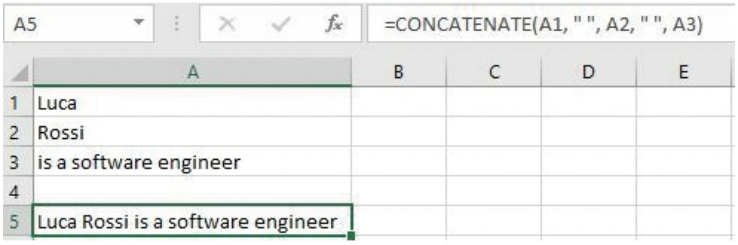

=CONCATENATE(text1; text2; text3...)

In this case, "*text1*" refers to the first text string you wish to concatenate, while "*text2*" (optional) stands for the second text string you wish to concatenate, and so on. You can include up to 255 text strings in a single *CONCATENATE* formula.

For example, suppose you have the following data in the following cells: *A1 - Luca, A2 - Rossi, A3 - is a computer engineer*.
In this case, the *CONCATENATE* function can combine these three text strings into a single sentence using this formula:

=CONCATENATE(A1, " ", A2, " ", A3)

The result of this formula will be: *Luca Rossi is a software engineer.*

It is important to note that in this example a space, (" "), has been used as a separator between different text strings. This element must be inserted whenever it is necessary to insert a space between one text string and the next.
Of course, any character or symbol as desired can be used as a separator, as can be left blank if you wish to concatenate strings
