multiple of a specified number. The correct syntax for the formula is as follows:

=CEILING(number; multiple)

For instance, to round the number 10 to the nearest multiple of 3 using the CEILING function, you can use the following formula:

=CEILING(10; 3)

Excel will round the number 10 to the nearest multiple of 3 upwards, resulting in 12.

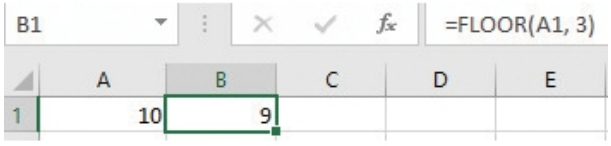

The *FLOOR* function, on the contrary, enables a number to be rounded down to the nearest multiple of a predetermined number. The correct syntax for the formula is as follows:

=FLOOR(number; multiple)

Using the previous example, to round the number 10 down to the nearest multiple of 3, you can use the following formula:

=FLOOR(10; 3)

Excel will round down the number 10 to the nearest multiple of 3, resulting in 9.

The TRUNC function is used when you want to remove decimals from a number without rounding. The correct syntax for the formula is as follows:

=TRUNC(number, num_digits)

The "*Number*" argument stands for the number you want to truncate, while the "*num_digits*" argument stands for the number of decimal places to which you want to truncate the number.
