=MODE(num1;num2;num3; …)

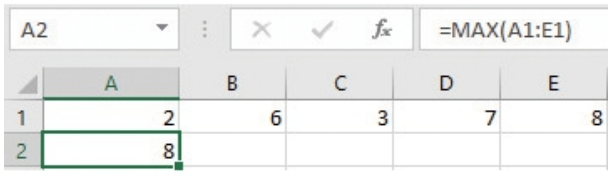

- **MIN Function**
  Returns the smallest value within a specified range of numbers.

=MIN(num1;num2;num3; …)

- **MAX Function**
  Determines the highest value within a specified range of numbers.

=MAX(num1;num2;num3; …)

- **COUNT Function**
  This function enables you to count the number of cells within a specific range that contain numbers.
  t proves useful in situations where a worksheet contains cells with various data formats, including numbers, text, or other values. By using the *COUNT* function, you can quickly identify which cells contain numbers and which are empty or contain other types of data.

=COUNT(num1;num2;num3; …)
