This function is like the previous one but specifically extracts the month from a specified date.

=MONTH(serial_number)

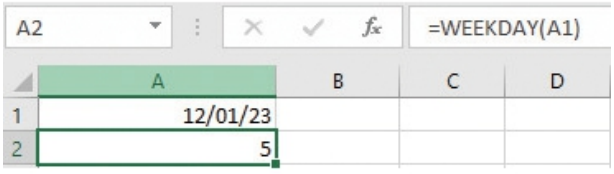

- **DAY Function**
  This function, like the previous ones, facilitates the extraction of the day of the month from a specified date.

=DAY(serial_number)

- **WEEKDAY Function**
  This function calculates the day of the week from a specific date, representing days as integers, where Sunday is denoted by 1 and Saturday by 7.
  The optional argument “return_type” allows you to specify the type of result desired.

=WEEKDAY(serial_number; [return_type])

- **EOMONTH Function**
