

- **TODAY + N.DAYS Function**
  This formula adds a specified number of days to the current date.

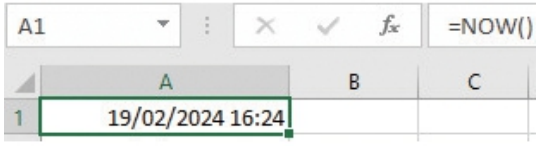

=DAY()+n

In addition to date functions, Excel also offers a wide range of time functions that facilitate calculations and manipulation of time values within the worksheet. Some of the most commonly used functions include the following:

- **NOW Function**
  This formula outputs the current date and time.

=NOW()

- **HOUR Function**
  This function extracts the time from a given time value.

=HOUR(serial_number)
