Domestically, measures are taken at the constitutional and statutory levels to address environmental concerns. Some of the important legal documents dealing with environment in the country are: Environment Protection Act (1986), Wildlife Protection Act (1972), Air (Prevention and Control of Pollution) Act (1981), Water (Prevention and Control of Pollution) Act (1974), Indian Forest Act (1927) and so forth. The Ministry of Environment, Forest and Climate Change is the nodal agency responsible for environmental policy formulation and implementation in the country. The judiciary also plays an unparalleling role through the instrument of judicial activism on environmental matters.

National Green Tribunal

National Green Tribunal, established in 2010, deals with the expeditious disposal of cases of environmental importance.

India and International Cooperation on Environment

New Delhi is a member of many of the multilateral environmental conventions, treaties and institutions. The Indian government underscores the historical responsibility of the west in the environmental degradation and projects its low per capita emissions. Climate change, as exemplified in the national policy narrative, acquires the position of being a development issue, basing "inter-generational equity" (which stands for greater environmental protection) that requires the current generation to treat development as a matter of urgency so that the upcoming generations receive an Earth invulnerable to climate change.

Nagoya Protocol

The Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization to the Convention on Biological Diversity, also known as the Nagoya Protocol on Access and Benefit Sharing (ABS) is a 2010 supplementary agreement to the 1992 Convention on Biological Diversity (CBD).

Its aim is the implementation of one of the three objectives of the CBD the fair and equitable sharing of benefits arising out of the utilization of genetic resources, thereby contributing to the conservation and sustainable use of biodiversity.

As a party to the Paris Accord, India subscribes to the non-negotiable nature of the agreement. Besides, the Government of India reemphasises "equity" and Common but Differentiated Responsibilities and Respective Capabilities (CBDR-RC). New Delhi's commitment to decarbonisation embraces a strategy to reduce its reliance on coal and to evolve a renewable energy-driven economy. India's role in global agenda of environmentalism reached a new high with the establishment of the International Solar Alliance, an idea proposed by the Indian government, in 2016.

Cochin International Airport

Cochin International Airport (CIAL), Kerala, is the world's first fully solar-powered airport.

Despite pushing a stern rhetoric, India's environmental profile is one of the worst in the world. According to a report
