International Solar Alliance

- The International Solar Alliance (ISA) is an alliance of more than 122 countries initiated by India, most of them being sunshine countries, which lie either completely or partly between the Tropic of Cancer and the Tropic of Capricorn, now extended to all members of UN.
- The Paris Declaration establishes ISA as an alliance dedicated to the promotion of solar energy among its member countries.
- Objectives: The ISA's major objectives include global deployment of over 1,000GW of solar generation capacity and mobilisation of investment of over US$ 1000 billion into solar energy by 2030.
- What it does? As an action-oriented organisation, the ISA brings together countries with rich solar potential to aggregate global demand, thereby reducing prices through bulk purchase, facilitating the deployment of existing solar technologies at scale, and promoting collaborative solar R&D and capacity building.
- When it entered into force? When the ISA Framework Agreement entered into force on December 6th, 2017, ISA formally became a de-jure treaty based International Intergovernmental Organisation, headquartered at Gurugram, India.

India is a party to the following international conventions, treaties and institutions

- Convention on International Trade in Endangered Species of Wild Flora and Fauna
- International Union for Conservation of Nature and Natural Resources
- The United Nations Educational, Scientific and Cultural Organisation
- Convention on Conservation of Migratory Species of Wild Animals
- International Whaling Commission
- Ramsar Convention
- United Nations Forum on Forestry
- International Tropical Timber Organisation
- Convention on Biological Diversity
- International Network for Bamboo and Rattan
- Asia Pacific Forestry Commission
- United Nations Convention to Combat Desertification
- United Nations Framework Convention on Climate Change
- Kyoto Protocol

launched by Global Carbon Project in 2018, India is the 4th largest emitter of carbon which accounts for 7% of the global emissions in the year 2017. Another report titled Environmental Performance Index (EPI) for the year 2018 ranks India 177 among 180 countries. The low ranking is deemed to be a result of poor performance in the environmental health policy and deaths due to air pollution.
