POINTS TO REMEMBER

- PHP while loops execute a block of code while the specified condition is true.
- The for loop is used when you know in advance how many times the script should run.
- The foreach loop works only on arrays, and is used to loop through each key/value pair in an array.
- do...while - loops through a block of code once, and then repeats the loop as long as the specified condition is true

GLOSSARY

Looping Structure	In programming it is often necessary to repeat the same block of code a given number of times, or until a certain condition is met. This can be accomplished using looping statements
for Loop	For loops execute a block of code a specified number of times.
foreach Loop	The foreach construct provides an easy way to iterate over arrays
While Loop	PHP while loops execute a block of code while the specified condition is true.

HQ4AWK

EVALUATION

Part - I

Choose the correct answer

1. The loop exclusively used for arrays is _____
   a) While
   b) Do While
   c) For
   d) for each
2. Loops that iterate for fixed number of times is called
   a) Unbounded loops
   b) Bounded loops
   c) While loops
   d) For loops
3. Which loop evaluates condition expression as Boolean, if it is true, it executes statements and when it is false it will terminate?
   a) For loop b) For each loop
   c) While loop d) All of them
4. for ($ *x*=0; $ *x*<5; x++)
   echo “Hai”
   The above loop executes how many no of times?
   a) 5
   b) 4
   c) 3
   d) 2
