```
$con=mysqli_connect("localhost","$user","$password","SCHOOL_DB");
mysqli_close($con);
?>
```

Example of PHP and MySQL Program:

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";
$dbname = "school_DB";
$connection = mysqli_connect('$servername ', '$username', '$password','$dbname');
if (mysqli_connect_errno())
 {
 echo "Failed to connect to MySQL: " . mysqli_connect_error();
 }
sql_stmt = "SELECT * FROM my_contacts"; //SQL select query
$result = mysqli_query($connection,$sql_stmt);//execute SQL statement$rows =
mysqli_num_rows($result);// get number of rows returned
 if ($rows) {
        while ($row = mysqli_fetch_array($result)) {
 echo 'ID: ' . $row['id'] . '<br>';
 echo 'Full Names: ' . $row['full_names'] . '<br>';
 echo 'Gender: ' . $row['gender'] . '<br>';
 echo 'Contact No: ' . $row['contact_no'] . '<br>';
 echo 'Email: ' . $row['email'] . '<br>';
 echo 'City: ' . $row['city'] . '<br>';
 echo 'Country: ' . $row['country'] . '<br><br>';
 }
}
mysqli_close($connection); //close the database connection
?>
```

In the above code the SQL query retrieves two records from student table in school database. These records are populated into client browser using PHP scripting language.
