Grease

Grease is manufactured with the ingredients of soap and mineral oils. Different types of grease are manufactured for specific applications under different commercial names. So, it is necessary to know the specific type of grease to be applied for the specific part.

6.9 Types of lubrication

The different types of lubrication are

1. Ring lubrication
2. Wick Lubrication
3. Splash Lubrication
4. Grease Lubrication

Ring Lubrication

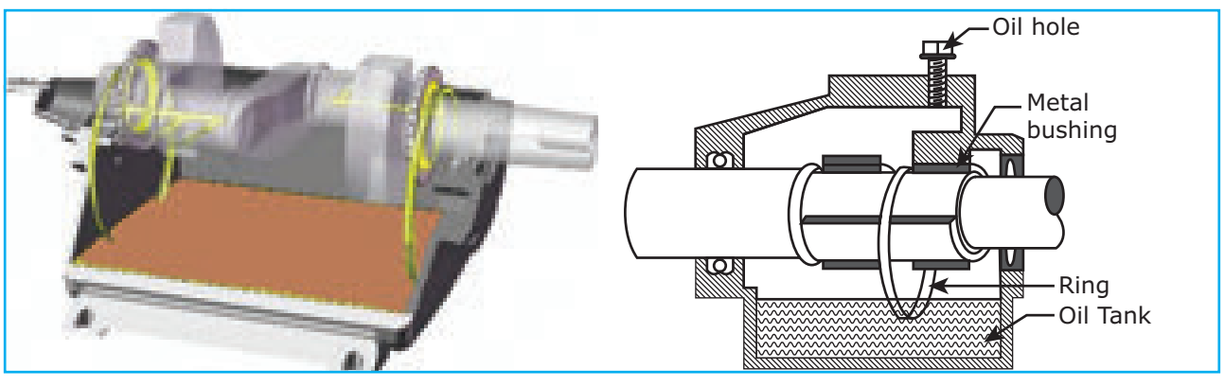

The method of lubrication involves a ring hanging from down the rotating shaft. The bottom portion of the ring is immersed in the oil container. When the shaft starts rotating, the ring also rotates. While the ring rotates, it carries a small amount of oil and the oil is spread into the bearing and the shaft.

Wick lubrication

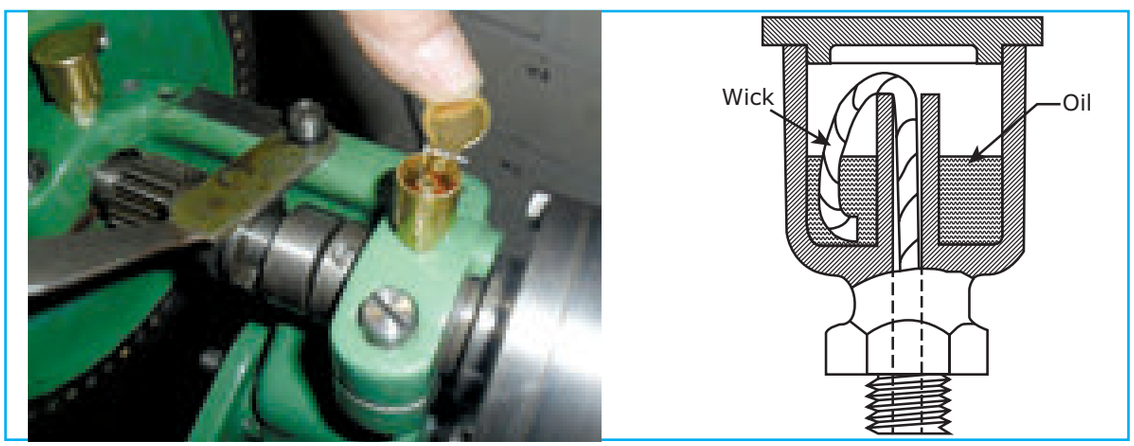

Wick lubrication is a method in which the wick along with a flexible thin piece of metal is used. A container having oil is placed above the bearing. The wick connects the container and the part to be lubricated. This lubrication enables the oil to flow from the container to the required place.

Splash lubrication

The rotating part of the machine itself is made to be immersed in the oil
