The Inventor of Arc welding is Sir Humbry David, by using two carbon electrodes and he find the flame between the rods.

Gas welding was invented by Nicole Benar Dass, Russian scientist by using oxygen Acetylene gas and found high flame which is used to connect two metals.

7.1 Introduction

Welding can be defined as the process of joining two metal parts by applying heat. In industry, welding process is primarily used for fabricating works.

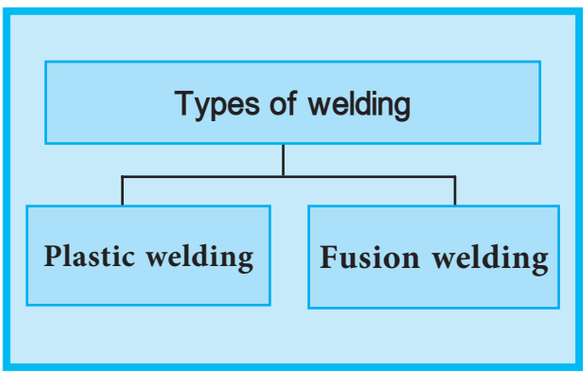

Welding is useful in making permanent joints. It can be performed by applying or not applying pressure. The contours of the metal parts are molten to make the joint in some methods. In some types of welding processes, filler metal is used. In some other methods, filler metal is not used.

The process of welding finds application in manufacturing automobiles, aeroplanes, rail coaches, machine components, metal structures, boilers and ships. Generally, welding process is applied wherever metal works are performed.

7.2 Types of Welding

There are two types by which welding is performed

1. Plastic welding
2. Fusion welding

Plastic Welding

In this type, the metal parts are heated to plastic state, In this stage. Pressure is applied to make a perfect joint. It is also known as pressure welding.

Fusion Welding

The metal parts are heated upto the point of melting in this type. The joint is made at this stage and the parts are allowed to cool. On cooling, the molten metal forms a solid joint. No pressure is applied in this method. Hence, it is also known as pressure less welding or Fusion welding Arc welding and gas welding fall in this category.
