

8.4 Features of Non-positive displacement pump

1. It cannot pump against of high pressure
2. It can handle more amount oil at low pressure.
3. A ship is volume will be felt, when the pump is working against at high pressures. Even if the outlet is closed, it will not cause any damage to the pump.
4. Self-priming is not possible.

8.5 Types of centrifugal pump

1. According to head of liquid
   a. Low lift pump
   b. Medium lift pump
   c. High lift pump
2. According to type of the casing
   a. Volute casing pump of oil
   b. Vortex casing pump
   c. Diffuser casing pump
3. According to number of impellers
   a. Single state pump
   b. Multi stage pump
4. According to the type of impeller
   a. Closed impeller pump
   b. Semi-open impeller pump
   c. Open impeller pump
5. According to direction of flow
   a. Radial flow type
   b. Axial flow type
   c. Mixed flow type

8.6 Types of reciprocating pump

1. According to the shape of the reciprocating part
   a. Piston pump
   b. Plunger pump
2. According to the action of the liquid
   a. Single acting pump
   b. Double acting pump
3. According to number of cylinders
   a. Single cylinder pump
   b. Multi cylinder pump
