Questions

Part I.

Choose the correct option 1 Mark

1. A device which transforms mechanical energy into hydraulic energy is
   a. Hydraulic pump
   b. Hydraulic Cylinder
   c. Hydraulic motor
   d. Hydraulic value

2. Impeller is a part found in a
   a. Reciprocating pump
   b. Gear pump
   c. Centrifugal pump
   d. Vane pump
3. The pump which is used in ship and marine field
   a. Centrifugal pump
   b. Reciprocating pump
   c. Rotary pump
   d. Special pump
4. The device which is used for control the quantity, direction and pressure of the flow of liquid passing through hydraulic circuit is
   a. Hydraulic pump
   b. Hydraulic motor
   c. Hydraulic cylinder
   d. Hydraulic valve

Part II.

Answer the following questions in one or two sentences 3 Marks

5. Define "Hydraulics"
6. What are the uses of "centrifugal pump"?
7. What is "priming"?
8. What are the uses of "hydraulic cylinder"?

Part III.

Answer the following questions in about a page 5 Marks

9. What are the five major types of centrifugal pump?
10. What are the types of reciprocating pump?

Part IV.

Answer the following Questions in detail. 10 Marks

11. List out the difference between a centrifugal pump and a reciprocating pump?
12. Draw the circuit of a hydraulic shaping machine and label its parts and explain its working principle.
