iv. Grouping

It is the arrangement of rooms in the house in respect to their relative positions and activities towards each other.

- The dining room close to the kitchen and living room, the living room near veranda, the toilet near bed room and so on.
- Grouping is based on convenience.

v. Roominess

It is the spacious effect a room gives to those who live in. The available space should be fully made use of.

- One can have built in wall cupboard, shelves and storage area so that the floor of the room is left free for various activities.
- The space under the staircase, window sill, area below the ceiling (attic/loft) can be made use of for storage.
- In addition the size and shape of the room, the furniture arrangement as well as the colour scheme used, have a bearing over the roominess of the house.

vi. Furniture Requirement

The rooms must be planned with due thought to the furniture to be placed there.

- The type, the position, size and the number must be planned earlier in respect to the size and placement of doors, windows and built-in cupboards in the room.

vii. Circulation

The circulation from room to room must be good. Good circulation means independent entry to each living space through a common space.

- It should provide privacy to the members and not to disturb any member doing his/her work in the room.
- Straight, short, direct passages must be provided.
- Circulation can be achieved by proper placement of the doors, grouping of the rooms and furniture arrangement.

viii. Flexibility

This means making use of a room originally designed for one purpose, for different purposes at various occasions.

- Converting a living room to a dining hall during function, a back veranda near the kitchen can be used as play centre for children, a dining room converted as child's study centre or play centre are examples.
- Screens, cupboards, folding partitions may help to make a room flexible and serve more than one purpose.

ix. Sanitation

It includes provision of light and ventilation and attention to general cleanliness and sanitary conveniences.

- There should not be any room in a house without enough light.
- Ventilation must be adequate. It means supplying fresh air and evacuating polluted air.
- Opposite windows and doors as well as ventilators must be provided for easy movement of air.
- Sanitary conveniences as provision for drainage of waste water, disposal of refuse and human waste must be planned ahead.
