Case Study

1. Sharmila's study room looks small. The walls are painted with dark purple colour paint. What change can she do to make that room look bigger?
2. In Raji's house, the living room is too narrow and long. How can she make the room to look approximately square?

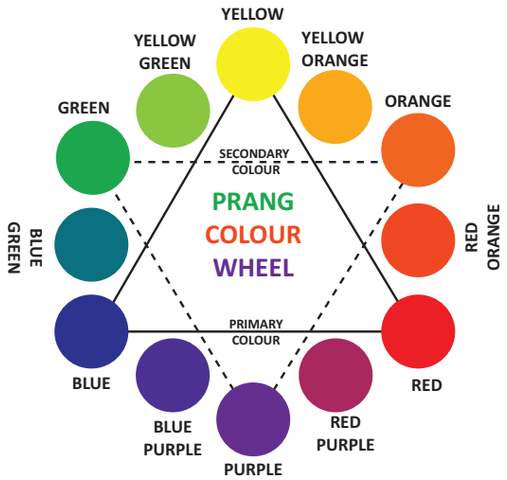

Answers

1. The walls can be painted with light colours as they give the feeling of spaciousness e.g banana yellow, light pink etc.
2. The two narrow walls in the living room can be painted with light value colours to make them recede/go back, while other two walls can be painted with full bright intensities to advance. Thereby making the room look like a square room.

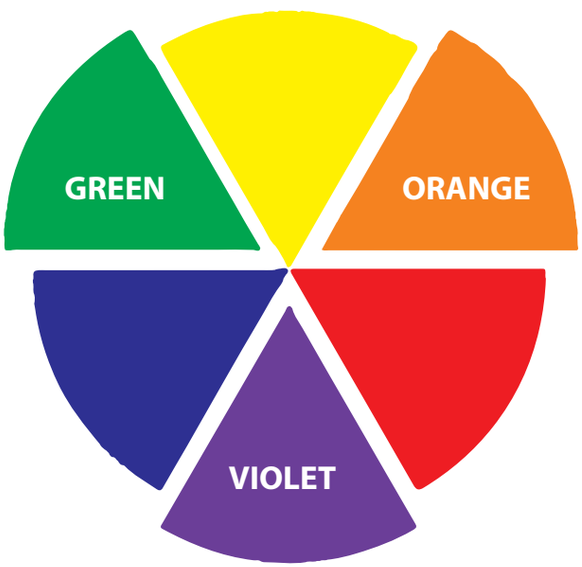

5.7.2 Classification of colours-Prang colour chart

In the Prang System, colours may be divided into five classes: Primary, secondary, intermediate, tertiary and quaternary.

1. **Primary colours:** All colours may be obtained by mixing in various proportions three fundamental hues: red (R), Yellow (Y), and blue (B). These are called the three primary colours, because they are the elements in the use of pigment. They are the only hues in pigment that cannot be obtained by mixing other hues.

2. **Secondary colours:** When two primary colours are mixed in equal proportions, we get secondary colours.

Yellow + Blue = Green.
Blue + Red = Violet or Purple.
Red + Yellow = Orange

The primary and secondary colours together are called **basic colours.**
