Experiment No 4

Aim:

To identify common food adulterants found in food substances

Materials required:

Milk, honey, Sugar, Chilly powder, Black pepper, cotton wick of test tube

S.No	Food item	Adulterant	Test	Inference
1.	Milk	Water	1. Lactometer reading should not be less than 1.026 2. Drop of pure milk flows slowly leaving a white trail behind whereas adulterated milk with water will flow immediately.	Adulterated/Not adulterated
2.	Honey	Molasses	A cotton wick dipped in pure honey when lighted with a match stick burns. If adulterated the presence of water will not allow the honey to burn.	Adulterated/Not adulterated
3.	Sugar	Chalk Powder	Dissolve in a glass of water, chalk will settle down at the bottom	Adulterated/Not adulterated
4.	Chilli powder	Stones	Any grittiness present may be felt by tapping the sediment at the bottom of glass confirms the presence of brick powder or sand.	Adulterated/Not adulterated
5.	Black Pepper	Papaya seeds	Papaya seeds give a repulsive flavour distinct from the bite of black pepper	Adulterated/Not adulterated
