cholesterol can be limited or replaced with vegetable like pulses and nuts proteins.

Sodium

Sodium is restricted when hypertension is present.

DO YOU KNOW?

Grapes have to be consumed with the seeds and skin as they contain resveratol - a powerful antioxidant that protects the heart.

Other dietary factors

In general a nutritionally balanced diet helps reduce the risk of CVD. Additionally specific dietary strategies also help to protect against heart diseases.

Dark chocolate – Moderate intake of dark chocolate (high in cocoa content) has antioxidant potential to lower LDL cholesterol.

DO YOU KNOW?

Approximately ⅓ rd the requirement of fibre (6-10g out of 30g/day) and antioxidants for adults can be easily met by taking 5-6 servings of fruit and vegetables per day (1 serving = 75-100g)

Dietary factor	Protection against CHD
Soluble fibre (apples and other fruits, oats, soy, barley, legumes).	• Lowers blood cholesterol • Lower risk of heart attack • Improves LDL to HDL ratio
Antioxidants like beta carotene, lycopene, vitamin E and vitamin C present in fruits and vegetables	• Slows progression of Atherosclerosis • Lowers risk of heart attack in people with CHD • Decreases LDL cholesterol
Soya (protein and isoflavones)	• Lowers blood cholesterol • Raises HDL cholesterol • Improves LDL to HDL ratio
Nuts (in small amounts) walnut, almond and groundnut	• Lowers blood cholesterol
