Set Up Android Path Configuration

First, create a new route in the Rails app that points to an Android version of path configuration.

ch03_10/rails/config/routes.rb

```
  Rails.application.routes.draw do
    # ...

    resources :configurations, only: [] do
      get :ios_v1, on: :collection
»     get :android_v1, on: :collection
    end
  end
```

Open ConfigurationsController.rb and copy-paste the body of ios_v1 into a new method, android_v1.

ch03_11/rails/app/controllers/configurations_controller.rb

```
  class ConfigurationsController < ApplicationController
    def ios_v1
      # ...
    end

»   def android_v1
»     render json: {
»       settings: {},
»       rules: [
»         {
»           patterns: [
»             "/new$",
»             "/edit$"
»           ],
»           properties: {
»             context: "modal"
»           }
»         }
»       ]
```
