Inspect the error by opening the Issues navigator: click the exclamation point inside the gray triangle icon in the upper left, or press ⌘ 5. This shows all of the project's errors and warnings.

Click on the only issue to see the full error message. Xcode is trying to tell us that it can't find `Info.plist` in the old directory, `HikingJournal`. This makes sense since we moved this file to `App/Resources`, as shown in the screenshot.
