

On the next screen, type “Tabs” in the Save As field at the top. Toward the bottom, make sure the `Models` folder is selected for Group and the HikingJournal target is checked. Click Create.

Xcode will automatically open the file for you. When it does, delete the generated contents and import the Hotwire and UIKit frameworks. Then, create two private `HotwireTab` variables, one for each link in the navigation bar: Hikes and Hikers.

ch04_02/ios/App/Models/Tabs.swift

```
import HotwireNative
import UIKit

private let hikesTab = HotwireTab(
    title: "Hikes",
    image: UIImage(systemName: "map")!,
    url: baseURL.appending(path: "hikes")
)

private let hikersTab = HotwireTab(
    title: "Hikers",
    image: UIImage(systemName: "figure.hiking")!,
    url: baseURL.appending(path: "users")
```
