```
)
```

The strings passed to `UIImage(systemName:)` reference icons provided by SF Symbols,[26] a library from Apple that includes more than 5,000 symbols that you can freely use in iOS apps. I recommend downloading SF Symbols and digging through the plethora of options.

Next, *extend* `HotwireTab` to add a new static property: `tabs`. Extensions are like opening up classes or monkey patching in Ruby. They let us add functionality to classes, even ones we don't own like `HotwireTab` from Hotwire Native.

`HotwireTab.all` mimics the method of the same name from `ActiveRecord`, creating a nice parallel back to Rails.

ch04_03/ios/App/Models/Tabs.swift

```
import HotwireNative
import UIKit

private let hikesTab = HotwireTab(
    title: "Hikes",
    image: UIImage(systemName: "map")!,
```
