```
»           app:layout_constraintEnd_toEndOf="parent"
»           app:layout_constraintStart_toStartOf="parent" />

    </androidx.constraintlayout.widget.ConstraintLayout>
```

To ensure the views don't overlap each other, constrain the bottom of the web view to sit up snugly against the top of the tab bar. Then, give the web view zero initial height so it can fill all the remaining available space.

ch04_10/android/app/src/main/res/layout/activity_main.xml

```
    <androidx.constraintlayout.widget.ConstraintLayout
        xmlns:android="http://schemas.android.com/apk/res/android"
        xmlns:app="http://schemas.android.com/apk/res-auto"
        android:id="@+id/main"
        android:layout_width="match_parent"
        android:layout_height="match_parent">

        <androidx.fragment.app.FragmentContainerView
            android:id="@+id/hikes_nav_host"
            android:name="dev.hotwire.navigation.navigator.NavigatorHost"
            android:layout_width="match_parent"
»           android:layout_height="0dp"
»           app:defaultNavHost="false"
»           app:layout_constraintBottom_toTopOf="@id/bottom_nav"
»           app:layout_constraintTop_toTopOf="parent" />

        <!-- ... -->
    </androidx.constraintlayout.widget.ConstraintLayout>
```

Add the second web view for the Hikers tab by copy-pasting another `FragmentContainerView`. Make sure to update the `android:id` property of each. Note how they read `@+id/hikes_nav_host` and `@+id/hikers_nav_host`, to better reflect the new layout. The other properties remain the same.

ch04_11/android/app/src/main/res/layout/activity_main.xml

```
    <androidx.constraintlayout.widget.ConstraintLayout
        xmlns:android="http://schemas.android.com/apk/res/android"
        xmlns:app="http://schemas.android.com/apk/res-auto"
        android:id="@+id/main"
```
