

We'll address the satellite view a bit later. But for now, take a second to learn how to manipulate the map in the simulator. This will give you a good idea of how much better the user experience is compared to a web-based map.

Manipulating the Map

In the simulator, you can hold down the ⌥ key to create a second "finger," which is useful for zooming in and out on the map. You can then hold down ⇧ to "stick" them together for two-finger scrolls.
