```
»               context = this,
»               location = PathConfiguration.Location(
»                   remoteFileUrl = "$baseURL/configurations/android_v1.json"
»               )
»           )
        }
    }
```

We'll add more to this file later in the chapter. But for now, let's create the screen that will power the map.
