## Prerequisites

This book assumes you have a decent understanding of building applications with Ruby on Rails and Hotwire. If you can create a basic CRUD app and add a few Stimulus controllers, you'll be fine. No Swift or Kotlin experience is necessary. I recommend *Agile Web Development with Rails 8*[2] and *Modern Front-End Development for Rails*[3] if you'd like to brush up on your Rails skills.

To get the most out of this book, I recommend building the apps as you follow along. To do so, you'll need to run a Rails server, Xcode, and Android Studio.

To run the Rails app, you'll need to have Ruby 3.4.2 and SQLite[4] installed. And you'll need Xcode[5] 16 and Android Studio[6] Meerkat or later on macOS to build the mobile apps.
