component powered by SF Symbols, the image set we used for the tab icons in Chapter 4, *Add a Native Tab Bar*.

Add a Dynamic Image

Start by adding the `bridge-image-name` data attribute to the "Add a hike" button in the hike index view, `app/views/hikes/index.html.erb`. Here, we're indicating the name "plus". This will map to the corresponding SF Symbol name that we want to display in the app:

ch07_18/rails/app/views/hikes/index.html.erb

```
<%= render "shared/header", title: "Hikes" %>
<%# ... %>

<div class="container d-flex justify-content-between gap-2 mt-4">
  <% if user_signed_in? %>
    <%= link_to "Add a hike", new_hike_path,
      class: "btn btn-primary flex-grow-1 flex-sm-grow-0", data: {
        controller: "bridge--button",
        bridge_title: "Add",
»       bridge_image_name: "plus"
      } %>
    <%# ... %>
  <% else %>
    <%# ... %>
  <% end %>
</div>
```

In `button_controller.js`, extract `image-name` from the `BridgeElement` and pass it to the call to `send()`, like so:

ch07_18/rails/app/javascript/controllers/bridge/button_controller.js

```
import { BridgeComponent } from "@hotwired/hotwire-native-bridge"

export default class extends BridgeComponent {
  static component = "button"

  connect() {
```
