```
»           let imageName: String?
        }
    }
```

We're using an optional value, hence the question mark after `String`, because not all buttons will have an image—some will only use the `title` text.

Give the app a run, and you'll see a plus sign in the upper right. When tapped, this icon will add a new hike like before.

Go ahead and apply the same technique to the submit button on the hike form, `app/views/hikes/_form.html.erb`. Here, we're only using a title, so the "Save" text will appear on the native button.

ch07_19/rails/app/views/hikes/_form.html.erb

```
    <%= form_with model: hike, class: "row g-3 mt-1" do |form| %>
      <%# ... %>

      <div class="d-grid d-sm-flex justify-content-sm-end mt-4">
»       <%= form.submit "Save", class: "btn btn-primary", data: {
»         controller: "bridge--button",
»         bridge_title: "Save"
»       } %>
      </div>
    <% end %>
```

Continue by doing the same for the hike show page, `app/views/hikes/show.html.erb`. Here, we'll use a pencil icon to convey editing
