Respond to Button Taps

To convert our text to a tappable button, replace the contents of `setContent` with a `Button()`.

ch08_08/android/app/src/main/java/com/masilotti/hikingjournal/components/ButtonComponent.kt

```
    // ...
    import android.view.Gravity
    import android.view.ViewGroup
    import androidx.appcompat.widget.Toolbar
»   import androidx.compose.material3.Button
    import androidx.compose.material3.Text
    import androidx.compose.ui.platform.ComposeView
    // ...

    class ButtonComponent(
        name: String,
        private val bridgeDelegate: BridgeDelegate<HotwireDestination>
    ) : BridgeComponent<HotwireDestination>(name, bridgeDelegate) {
        private val fragment: HotwireFragment
            get() = bridgeDelegate.destination.fragment as HotwireFragment

        override fun onReceive(message: Message) {
            val composeView = ComposeView(fragment.requireContext()).apply {
                setContent {
»                   Button(
»                       onClick = { replyTo(message.event) }
»                   ) {
»                       Text("Sign in")
»                   }
                }
            }
            // ...
        }
    }
```

When the button is tapped, it will call the code you assigned to `onClick`. As you did in the previous chapter, replying to `message.event` tells the
